

# COVID-19 Prevention Cleaning

Biohazard personal protective equipment (PPE) and full-face respirator masks are worn at all times and decontamination units are provided to support significant site activity.

Adherence to a stringent Coronavirus demobilisation process for our equipment, trucks and waste storage areas.

CDC and EPA approved industrial-strength disinfectants used with a broad spectrum kill.

Comprehensive bio-cleaning training service for operators working in or near contaminated areas. Service includes respirator mask fitting, which is a legal requirement.

**SCK Group offers an extensive and unique range of expert disinfection and cleaning services to ensure potentially harmful and hazardous situations are dealt with in a safe, discrete and legally compliant manner.**

We offer a reactive response service which provides reassurance that locations which could be affected by potentially hazardous situations are expertly and professionally attended to ensuring all sources of contamination are eradicated quickly and safely.

These services include the clean-up of hazardous environments such as vacant properties where drug paraphernalia and bodily fluids could be present to the safe removal of harmful bird droppings from buildings and the clean-up of flood and sewage damaged properties.

These solutions form an essential resource utilised by many authorities as well as many commercial organisations throughout the UK to help protect against infectious bacteria and diseases.

An outbreak of an infectious virus can occur anywhere from schools, hospitals to work places and as they can survive for up to several days on surfaces or objects touched by an infected person. Whilst manual cleaning is best practice to treat surface bacteria, fogging is an ideal solution both for combating airborne pathogens, as well as disinfecting large areas that require rapid re-entry of treated areas and minimum disruption.

**Please note:** Due to the high demand for COVID-19 decontamination and cleaning site visits are being booked a first-come, first-served basis.
