

Case Study

Asbestos Removal

Project Name: National Supermarket Chain, Greater London

Project Value: £82,000.00

Project Scope: Removal of Textured coating to main sales area throughout which has been applied to the concrete soffit approximately 1200 M2

Project Brief

SCK Group Ltd were successful in obtaining a prestigious contact in greater London for a high end retailer to remove the Textured coating which had been applied to the concrete soffit throughout the main sales area shop floor which covered an area of approximately 1200 M2.

Due to the SCK Group's experience in these type of projects we identified at the preliminary site evaluation that we would have an economic advantage over our competitors at the tender stage due to our plan to use the Capsure Pure foam based delivery system for the safe removal of the textured coatings.

With its application the time constraints of the removal process are reduced by over 50% along with a reduction in our labour element with results of an operative removing circa 45 M2 per shift without the fatigue elements found with the standard methods used for Textured coating removal, based on these benefits of using the Capsure Pure Foam, we were in a position to be more economically viable at the tender stage which made the SCK Group successful in obtaining the contract due to our shortened duration on removal times and cost effectiveness which was passed onto our client.

Throughout the duration of the contract we operated with typically 50% less of our normal labour which would be applied to a project of this size and we delivered the project two days earlier than anticipated, the dust suppression and clean of the enclosure was made faster again due to the properties of the Capsure Pure foam and we are looking forward to working with Capsure Pure and SMH on our next project.
