

Case Study

Asbestos Removal / Demolition / Scaffolding

Project Name: Duke Street, Mayfair

Project Scope: Safe removal of circa 450 tons of concrete and contaminated soils from the sub basements of it's 4 property's

Project Value: £495,000.00

Project Brief

SCK Group Ltd were successful in obtaining a prestigious project in one of the most iconic buildings in Mayfair, London.

The project scope was to remove circa 450 tons of concrete and contaminated soils from the sub basements of the 4 property's which make up the block to 4 adjoining streets, this was to lower the building's basement levels to facilitate new retail development, the complex operation to do this within a listed property was precisely engineered by SCK Group Ltd utilising conveyor systems to remove the waste from the basements up through the ground floor and into the waiting haulage which would have to be situated on the street level above the project, furthermore the breaking out had to be carried out using hand held equipment due to the limited access and design of the existing basements along with adhering to strict noise working times due to local residents and retail property.

The duration of the project was 5 weeks including scaffolding, installation of the conveyor systems, site mobilisation and de-mobilisation which went according to our clients programme along with complete satisfaction from local residents and retail owners.
