

Case Study

Asbestos Removal

Project Name: School Project, Surrey

Project Scope: Removal of internal ceiling boards and sky-lights containing asbestos

Project Value: £60,000.00

Project Brief

SCK Group complete a diligent and safe removal of asbestos insulating boards to ceiling areas within a school in Surrey. Works were planned in accordance with the client's localised needs to ensure that all activities were managed with minimum disruption to the school and its visitors.

Segregation and air monitoring was planned in advance and the work was audited by SCK's Health and Safety Director and special emphasis was on due diligence and asbestos enclosure integrity. Air monitoring records were also inspected demonstrating excellent working methods had been adopted inside and outside the live asbestos enclosures.

The client was regularly provided with re-assurance of the working methods and the progress of the works.

Health and Safety remains a focus in SCK Group's planning.
