Asbestos Removal

Project Name: Watford School

Project Scope: Removal of all asbestos containing materials as identified within a Demolition asbestos survey

Project Brief

SCK Group Ltd were contracted to carry out removal of all asbestos containing materials as identified within a Demolition asbestos survey to the science block at the school, our project brief was: remove ceilings throughout ground and first floor due to asbestos insulating board debris contamination from a previous removal project circa 1600 m², removal of external asbestos insulating board panels below the windows around the entire perimeter of the building to ground and first floor, removal of asbestos containing floor tile and bitumastic adhesive and removal of asbestos flues to fume cupboards throughout the building.

We obtained this project through careful planning along with offering the client a solution on not using a standard tube and brace scaffolding within a full enclosure to remove the panels below the windows, our construction division built bespoke timber frames from the ground to 1st floor to enable a complete enclosure to be erected around the perimeter from the ground floor to the first floor of the building which a mobile tower scaffold system could safely operate within the fully controlled enclosure, this gave the client considerable cost and time savings which SCK Group Ltd were the only company during the tender stage to offer such a solution which gave us the financial and time saving advantage over our competitors.

The project was executed exactly to plan financially and time scales were reduced on the removal process which gave our demolition division an earlier start date for full demolition of the building.
