

## Case Study

### Demolition

**Project Name:** Acotel Submarine Networks

**Project Scope:** Removal of high level air handling systems

#### Project Brief

SCK Demolition were successful in obtaining the contract to decommission the high level air handling systems.

The air handling system sections at high level were deconstructed by our site teams upon the mobile elevated work platforms. Specialist lifting and lowering equipment were used to lower the deconstructed sections of equipment to the floor to complete this project safely and within the duration set by our client.

Whilst this project was taking place, we had to precisely plan the waste movements due to the size of the equipment and associated risks with other trades working within the same warehouse environment. This project was delivered ahead of schedule and to the clients full satisfaction.
