Demolition

Project Name: Aerospace Building, Boiler House, Hertfordshire;
Manufacturing and Testing Aviation,

Project Scope: Decommissioning of specialist plant.

Project Brief

SCK Demolition Ltd were instructed to carry out a full strip out and deplant of specialist aviation manufacturing equipment and internals of building. This included specialist cutting of the exterior insulated system built panels to the roof of the building to enable natural light roof windows to be installed, along with a bespoke manufacturing ventilation system.

The work was carried out over a duration of three weeks using specialist cutting and lifting/lowering equipment to ensure the transition of the high level equipment being dismantled, using mobile elevated work platforms, was carried out in a safe and controlled manner.

SCK Demolition demonstrated our ability to solve complex problems on plant decommissioning to aid the client on a project which they considered not viable at one point.
