Asbestos Removal

Project Name: Kingston College, Greater London

Project Scope: Asbestos removal to 1st floor corridor ceilings and external duct trenches.

Project Brief

SCK Group were successful in being awarded the contract to remove AIB panels throughout the 1st floor corridors at Kingston College.

The enclosures had to be designed and erected to allow for the 1st floor to stay operational and fire exits to be able to be used with an emergency situation. Careful planning by the contracts team allowed this project to be carried out ahead of the half term break which was critical for the refurbishment programme.

Whilst on site, the client requested that the external service ducts were to be surveyed which we assisted in. Once AIB linings had been identified, we designed and executed a programme of works to enable the removal of all licensable materials identified within the external ducts, under fully controlled conditions.

The client was extremally satisfied with our fast turnaround times and ability to deliver a project that was ever changing.
